

15. (New) A reflection-type liquid crystal display comprising: a transparent first substrate;
a transparent electrode provided on said transparent first substrate;
a second substrate;
an insulator film which is provided on said second substrate and also on a surface of
which is formed an uneven structure; a reflecting electrode which is provided on said insulator
film in such a shape as reflecting said uneven structure; and a liquid crystal layer in between and
in contact with said transparent electrode formed on said first substrate and said reflecting
electrode provided on said second substrate; wherein said insulator film includes a first
insulating layer in which a large number of depressions are irregularly arranged which are
isolated as surrounded by protrusions and a second insulating layer which covers said first
insulating layer entirely.
